

Cell Worksheet

Name _____

Date _____ Period _____

Use context clues from your notes and Chapter Two to help complete the following statements.

- _____ 1. A cell component that performs specific functions in a cell is called a(an) ____.
- _____ 2. ____ are found within the cytoplasm or on the rough ER.
- _____ 3. Cells that lack nuclei and membrane bound organelles are called ____.
- _____ 4. The ____ keeps out some molecules but allows others to pass into the cell.
- _____ 5. ____ are organelles that contain chlorophyll.
- _____ 6. A cell that contains membrane-bound organelles is called a(an) ____.
- _____ 7. The ____ surrounds the cell membrane in plant cells.
- _____ 8. A living thing consisting of more than one cell is called ____.
- _____ 9. By whipping back and forth, ____ swiftly move unicellular organisms, such as Euglena.
- _____ 10. ____ are large fluid-filled sacs in plant cells.
- _____ 11. The structure within the nucleus that builds ribosomes.
- _____ 12. The organelle that uses enzymes to recycle damaged organelles ____.
- _____ 13. Rod-shaped bodies that appear during cell division are called ____.
- _____ 14. A living thing composed of only one cell is a(an) ____ organism.
- _____ 15. The ____ is the material found between the nucleus and cell membrane.

List the three parts of the Cell Theory.

16. _____

17. _____

18. _____
