## Plate Tectonics

ries of  
in formation  
tes. The  
discussion,  
ode!

This activity begins with a great video describing the inside of the earth and the theory of Continental Drift and Plate Tectonics. The video also hits on points such as mountains, earthquakes, volcanoes, and landform creation caused by moving plates. Students should take notes during the video to be discussed afterwards. Following the video, the students explore the different plate movements using a hard-boiled egg earth model.
