

A question of life or death

Background knowledge

All living things carry out certain life activities. They respire, grow, and obtain food or nutrition. They all aspire to obtain energy. Some respire by using gases from the air. All living things must excrete or get rid of the waste they produce. Living things also move. They may move to get food or run away from an enemy. Last, living things are sensitive to the environment around them. For example, some feel pain or heat.

Science activity

The words below describe some of the life activities of living things. Draw a line from each word to the picture that shows it happening.

Reproduces
Excretes
Respires
Grows
Feeds
Senses
Moves

Science investigation

Place some gall bags or chickens in a large covered jar with holes in the lid. Add a cut-up potato and some fish food. Observe the critters and note down all of their life activities. Do they engage in every activity? Design and conduct an experiment to determine the critters' sensitivity to their environment.
