COMPARE AND CONTRAST TEXTS

- Provide two passages on a similar theme but from different perspectives.
For example, one passage could be about solar energy and another about wind energy.
- After reading both texts, students should create a Venn Diagram or T-Chart to compare and contrast the main points, advantages, and challenges of each energy source.

QUESTIONS:

1. What are the similarities between solar energy and wind energy?

2. How do the authors' points of view differ in these two texts?

3. Which energy source seems more sustainable based on the information given?
