TECHNOLOGY IN EDUCATION

Instructions: Read the passage carefully, answer the questions based on the information in the text, and write your answers in the space provided, rereading the passage if you're unsure.

Over the past two decades, technology has dramatically transformed the way students learn and interact with educational content. With the advent of digital devices, online resources, and educational apps, classrooms have become more interactive and engaging. Students can now access information at their fingertips, from online textbooks and videos to virtual simulations and interactive platforms.

While technology has many advantages, such as personalized learning and the ability to access resources anytime and anywhere, there are also concerns. One major issue is the over-reliance on technology, which can lead to a decrease in face-to-face interactions and a decline in critical thinking skills. Some educators argue that students may become more distracted by social media or other entertainment websites, which can affect their focus on academic work.

Furthermore, technology can create disparities in education. Not all students have equal access to devices or the internet, which can contribute to the digital divide. As a result, some students may fall behind in their learning due to a lack of resources, particularly in underfunded schools or rural areas.

Despite these challenges, technology remains a powerful tool for enhancing education. With proper guidance and balanced use, it has the potential to revolutionize learning, making education more accessible and engaging for students worldwide.

Questions

1. How has technology transformed the way students learn?

2. What are two advantages of using technology in education mentioned in the passage?

3. What is one concern about the over-reliance on technology in classrooms?

4. How can technology contribute to the digital divide?

5. What is suggested as the key to using technology effectively in education?
